

Main Features

	<p>Picture Input</p> <p>Allows the user to take a picture of the member and store it into the member's profile with any standard webcam. With the directX technology embedded inside MIS, the user is not entitled to using any particular webcam, thus allowing the user to use any webcam available at their local computer store.</p>
	<p>Fingerprint Input</p> <p>Allows the member to use his/her finger for signing in. This eliminates the need to create id cards or stress over the identity of the member. It also is convenient for the owner and the member eliminating the hassle of carrying key chains and wallets to your workout facility. Another benefit of biometrics is the money you will be saving on membership cards and ink to print out photo ids.</p>
	<p>Barcode Input</p> <p>Allows the member to use his/her photo id for signing in. This eliminates the need for the member to remember their member id. MIS is setup to be compatible with any type of barcode reader that has keyboard wedge output, thus eliminating the need to purchase a particular type of barcode reader.</p>
	<p>Keypad Input</p> <p>Allows the member to type in his/her membership number to sign in. With keypads available starting as low as \$10.00, this makes it affordable for facilities working on a low budget. Just plug in the keypad into the USB and your member's can start signing in today.</p>
	<p>Multi-Member Scan Screen</p> <p>Accepts input from keypad, barcode reader, and fingerprint reader separately or simultaneously. When a user signs in, the thumbnail forms rows and columns, allowing the front desk clerk not to be present while signing in takes place. The front desk clerk then reviews the thumbnails and takes action according to member status.</p>
	<p>Bank Auto Draft (ACH)</p> <p>Allows you to collect payment from your member's credit card or checking account quickly and reliably. No longer will you have the daunting task of keeping your member's system and billing system synched up. MIS allows you to create recurring billing transactions to ACH Direct's billing system and post settlements directly from the software.</p>

	<p>Account Receivables</p> <p>Keeps track of all of your purchase transactions made inside MIS. They are stored as invoices allowing you to print, apply payment and give a refund directly to the invoice. Tax information is also stored inside to retrieve quarterly or whenever sales tax information is needed. The accounts receivable report gives you the ability to print out money coming in and balances between any periods of time.</p>
	<p>Unlimited Members</p> <p>With MIS, you can store as many members as your computer can store. While other companies are trying to sell you software based on member quantity, MIS does not have such restrictions. As your facility grows, no additional purchases are required.</p>
	<p>Employee Time Clock</p> <p>Allows a membership facility to keep track of all payroll times in MIS. You can use the keypad, barcode reader, or the fingerprint reader to input employee times the same way a member signs in. You no longer have to use a separate software package to keep track of your employee hours.</p>
	<p>Batch Emailer</p> <p>Allows a membership facility to send batch emails with attachments to all members. You no longer will spend numerous hours sending one email at a time to all of your members. With a few clicks of the mouse, a batch will be created and sent to all desired members.</p>
	<p>Class Scheduler</p> <p>Allows a company to assign their weekly class schedule. This allows a facility who wishes to keep track of class attendance to do so. When a facility uses this feature, the member will sign in showing the available classes for the front desk clerk to assign them to. This will allow class attendance data to display accurately on sign in reports.</p>
	<p>Training Scheduler</p> <p>Allows you to keep track of your employee's training schedules. Management can easily assign members to the employee schedule in an outlook style calendar. You can view and print in daily, weekly, monthly, and batch modes.</p>

	<p>Custom Reports</p> <p>Allows a membership facility to customize and save any report list in MIS. You can customize which fields go on the report, what position they belong in, along with their width and fonts. You can even group by any field in the list. There is also an option that allows you to print mailing labels with a click of a button. This allows you to create powerful reports within seconds.</p>
	<p>Promotion Tracker</p> <p>Allows a membership facility's administrator to give rewards bases on a member's action. For example, you can give a free month of gym if a member refers 2 new members. With a few clicks of the mouse, you will have a list of member's who meet the required criteria to receive the reward.</p>
	<p>Family Members</p> <p>Allows a membership facility to link another member to another profile. This allows the membership facility to share memberships and keep track of children that are coming in to the facility.</p>
	<p>Drivers License Scan</p> <p>Allows a membership facility to quickly enroll members into the system. When a new member comes in to sign up, all you have to do is swipe there drivers license and MIS will automatically read and input the member's general demographic information. If your facility calls for quick enrollment of new members, this feature is a must.</p>
	<p>Free Technical Support</p> <p>All facilities using our software are entitled to free technical support via email, online chat and telephone.</p>
